

PRESENSITIZED PHOTO STENCIL FILM

MacDermid Five Star Film

The world's most widely used indirect photo-stencil film. FIVE STAR provides the screen printer with excellent edge definition and high resolution for a wide range of demanding screen printing applications including half-tones and printed circuit board imaging. The presensitized red gelatin emulsion of FIVE STAR includes a special protective coating to prevent blocking even at high humidity levels.

MacDermid Green Star Film

Screen Printers are often faced with having to expose from composite (multi-layer) positives. Dirty tape edges or dust can be a problem, too. With many films, this can lead to pinholes resulting in lost time for retouching. GREENSTAR is specially designed to burn-out most of these imperfections and is a tough general purpose film giving outstanding adhesion to the mesh, even after over-exposure.

MacDermid Capillex capillary films

Capillex films are precision coated, pre-sensitized capillary photostencil films, which are adhered to the mesh with water prior to exposure. Capillex is available in a variety of thicknesses, for use on a wide range of mesh counts. The films are coated onto a 3 mil polyester base. The films have been designed for use with solvent-based or UV-curing inks. Capillex films are particularly suitable for applications requiring high durability and quality.

Capillex 20 has been specifically developed for printing fine line images where quality, consistency and durability are essential. Mesh range 250 - 355/ inch.
