Brush Cleaning and Care

NACK 13SE CER

Always clean out a brush thoroughly after use. The general rule for cleaning: the solvent or thinner that goes with the paint being used, becomes the cleaning agent. If the paint or medium you are using is compatible with mineral spirits, it is suggested using this as a cleaning agent.

When brush is cleaned, carefully wipe the hair without pulling. Storing the brush greased with light oil prevents any residual paint from drying on the brush.

Do not allow cleaning agent to get into the glued part of the brush, some cleaning agents can attack the glue and cause the hair to loosen.

Brush Conditioner & Cleaner #4004

Created specifically for cleaning and storing brushes which have been used with oil based paints. Quarts: \$19.35
